Zelterman, Daniel, Patricia M. Grambsch, Chap T. Le, Jennie Z. Ma, and James W. Curtsinger, 120:233
Zhou, Ying, and Jonathan Bell, 119:169

Adrenal-postpituitary imbalances, and identifiability analysis, nonlinear adaptive control of, 121:155
AIDS, antigenic diversity threshold model for, 121:235
Antigenic diversity threshold model for AIDS, 121:235
Autocatalytic reaction networks, influence of mutation, 122:127

Bellman Prize, Fourth, 119:1
Bidomain equations, linear algebraic transformations of, 120:127
Bidomain equations, periodic, approximate solution, in one dimension, 120:189
Bifurcation theory, general results, chaos in one-predator, two-prey models, 122:221
Binary trees, labeled, agreement metric for, 123:215
BOOK REVIEW: Barry, Sean J., and Mangel, Marc, Kinetic Theory of Living Pattern (Lionel Harrison), 124:237
BOOK REVIEW: Bell, George I., Receptors: Models for Binding, Trafficking and Signaling (Douglas A. Lauffenburger and Jennifer J. Linderman), 124:235
BOOK REVIEW: Gomulkiewicz, Richard, Life History Invariants: Some Explorations of Symmetry in Evolutionary Ecology (Eric L. Charnov), 124:123
BOOK REVIEW: Rosenheim, Jay A., Design and Analysis of Research Studies (Bryan F. J. Manly), 121:249
BOOK REVIEW: Wofsy, Carla, Biological Kinetics (Lee A. Segel), 121:123

Cancer chemotherapy, optimal drug regimens in, 123:183
Carcinogenesis, stem cell model for, 120:211
Chaos, in one-predator, two-prey models, bifurcation theory, 122:221
Chemostat models, quiescence and transient growth dynamics in, 119:225
Chlamydia, gonorrhea, and HIV, effect of partner mixing and migration on spread of, 120:1
Clones, premalignant, quantitative analysis of two-dimensional observations of, 119:5
Codon recognition logic, geometric model for, 121:227
Compartmental models and competing risk, 121:111
Controlled grazing systems, differential-delay model of pasture accumulation and loss in, 121:37
Core group, effect of partner mixing and migration on spread of gonorrhea, chlamydia and HIV, 120:1
Corneal epithelial wound healing, mathematical modeling of, 124:127
Cumulative damage models, fitting epidemiologic follow-up studies with, 120:147

Dictyostelium discoideum, G protein-based model of adaptation in, 120:25
Differential-delay model of pasture accumulation and loss in controlled grazing systems, 121:37
DNA damage and proliferation and aging of cells in culture, mathematical model with time lag, 122:67
Droop equations, attractiveness of, generic uptake and growth functions, 121:127
Dual sorption model, lag time in, for percutaneous absorption, 123:1

Electrocardiographic transformations, inverse, 120:165
Environment, polluted, permanence of populations in, 122:235
Epidemic
  in finite population, 123:167
  models
    discrete-time computation of R_0, 119:97
    SI, *SIR*, and *SIS*, discrete-time, 124:83

Follow-up studies, epidemiologic, fitting, with cumulative damage models, 120:147
Fractal properties of ion channels and diffusion, 123:77

G protein-based model of adaptation in *Dictyostelium discoideum*, 120:25
Gause-type two prey–two predator pair, generalized, linked by competition, persistence of, 122:1

Gonorrhea, chlamydia, and HIV, effect of partner mixing and migration on spread of, 120:1
Growth dynamics, quiescence and transient, chemostat models, 119:225

Hepatitis B virus, cellular model, 123:25
Heterogeneity, stochastic, time-dependent, influence of, on radiation response of cell population, 122:201
HIV
  basic reproduction ratio of, among intravenous drug users, 123:227
  gonorrhea, and chlamydia, effect of partner mixing and migration on spread of, 120:1
  transmission model, application to Australian epidemic, 119:205

IFCS Prize for Oustanding Research, announcement, 123:249
Intravitreal drug injection, pharmacokinetic model of, 123:59
Ion channels, and diffusion, fractal properties of, 123:77
Lag time in dual sorption model for percutaneous absorption with finite skin-receptor boundary clearance, 123:1
Limit cycles, saddle points and, of four-species system, multiple cyclic sets connecting, 121:141

Malignant transformation, simulating, 123:127
Markov random fields, modeling protein cores with, 124:149
Maximum sustainable yield with continuous age structure and density-dependent recruitment, 120:99
Measles, seasonally varying contact rate for, reconstruction of, 124:225
Microbial
  Populations, periodic, quasi-periodic, and chaotic coexistence of, 121:61
  Predation in coupled chemostats, global study of two coupled nonlinear oscillators, 122:25
Multiple cyclic sets connecting saddle points and limit cycles of four-species system, 121:141
Mutation, influence of, on autocatalytic reaction networks, 122:127

Nonlinear
  Adaptive control of adrenal–postpituitary imbalances and identifiability analysis, 121:155
  Compartmental models, indistinguishability, 119:77
  Diffusion of growth inhibitory factor in multicell spheroids, 121:1

Pancreatic β-cells, mathematical model, 119:241
Percutaneous absorption, lag time in dual sorption model for, 123:1
Permanence of populations, in polluted environment, 122:235
Pharmacokinetic model of intravitreal drug injection, 123:59
ϕ Mixing model, clarification of, 124:1
Population
  dynamics, simplified model, age-dependent, 121:15
  age-dependent, separable solutions of, 119:115
  simple models, 122:183
Potentials, multichannel evoked, as voltage space trajectories, 124:207
Predator-prey dynamics, models, prey dispersal in two-patch environments, 120:77
Propagation, study of, along nonuniform excitable fibers, 119:169
Protein
  classification, 119:35
  cores, modeling, with Markov random fields, 124:149
Purine/pyrimidine autocorrelation function, analytical expression of, 123:103

R_0, discrete-time computation of, epidemic models for, 119:97
Reaction networks, autocatalytic, influence of mutation on, 122:127
Reactor network, four-membered, steady-state coexistence, 123:147
Reproduction ratio R_0, basic, for sexually transmitted disease, in pair formation model, 124:181
Reproductive ratios, some bounds on estimates for, derived from age-specific force of infection, 124:9

Saddle points, and limit cycles of four-species system, multiple cyclic sets connecting, 121:141
SI, *SIR*, and *SIS* epidemic models, discrete-time, 124:83
Spheroids, multicell, nonlinear diffusion of growth inhibitory factor in, 121:1
Survival curves, piecewise exponential, with smooth transitions, 120:233
System isolation, increased, greater signal regularity may indicate, 122:161

Trajectories, voltage space, multichannel evoked potentials as, 124:207
Transformations, linear algebraic, of bidomain equations, 120:127
Transmission model
for disease with some fatalities, 124:107
HIV, application to Australian epidemic, 119:205
Tumor transition rates, multiple, estimating, based on data from survival–sacrifice experiments, 122:95

Vaccination schedules, and waning immunity, 124:59
Vaccines, epidemiologic effects of, with complex direct effects in age-structured population, 121:193
Vasomotion, of small arteries, origin and dynamics of, 119:127

Waning immunity and its effects on vaccination schedules, 124:59
Weber's law modeled by mathematical description of beam balance, 122:89
Wound healing, corneal epithelial, mathematical modeling of, 124:127
